

90% of OmniFocus users get stuck on its steep learning curve...

But you're about to discover how the right OmniFocus setup will help you stay organized and get stuff done, like:

- How to incorporate the crucial “Available” perspective into your daily workflow
- How to customize your Forecast perspective
- How to correctly use the three types of dates in OmniFocus

And more.

But that's just the start.

What if I told you that by tomorrow, you could finally clear your mind, get organized, and *stay* organized — if you build the right system around OmniFocus?

Discover how in my [full OmniFocus course](#).

— Peter Akkies

Tip #1: Use dates and flags correctly.

OmniFocus has so many properties you can assign to tasks and projects: defer dates, planned dates, due dates, tags, flags, and more!

Here's how to use these correctly:

Feature	Meaning / use
Defer dates	I can't work on this until... (Or: I almost certainly won't work on this until...)
Planned dates	I plan to work on this on...
Due dates	The hard deadline for this is...
Flags	This is one of my top 3 priorities for today
Tags	Extra slicing and dicing (learn more in my course)

Tip: use due dates **only** for hard deadlines. Do not use due dates to create a fake sense of urgency, because if you do that, due dates will lose their meaning for when you really do have a hard deadline.

And look, using OmniFocus's three different date types is tricky! I see so many people use them wrong all the time.

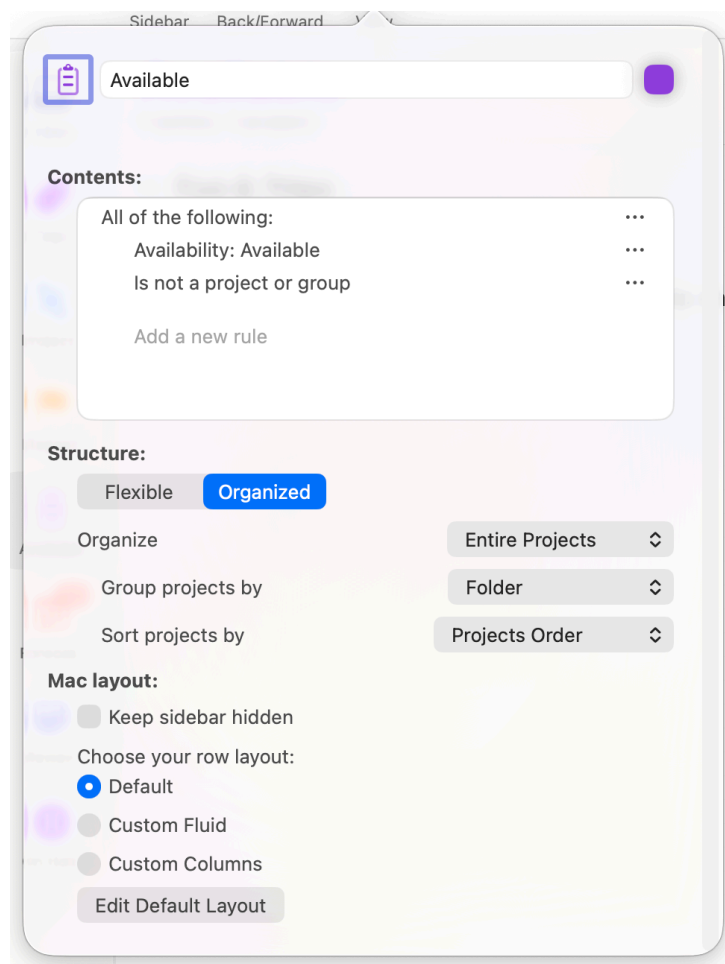

The fastest way to master dates and to build a complete OmniFocus workflow is to enroll in my course, [Organize Your Life with OmniFocus](#).

I've been refining my course since 2019. Over 1,500 people have now enrolled in it. It can help you be your most organized and productive self, too.

Tip #2: Use my custom “Available” perspective to plan your to-do list for each day.

OmniFocus is an incredibly powerful database of your to-dos. But if you’re not careful, your lists will just feel overwhelming to look at. This is why I designed the custom “Available” perspective. It’s absolutely crucial.

Each morning, when you’re planning your to-do list for the day, this custom perspective will show you exactly what it makes sense to work on today. It makes planning your day easy-peasy. Set this custom perspective up like this:

The Available perspective is just one part of my recommended OmniFocus setup and workflow. You should really use it together with other techniques that I teach in [my OmniFocus course](#), like “reducing your choice set”, which is a second layer of defense against overwhelm.

Note: custom perspectives, and the workflow I teach, require the Pro version of OmniFocus.

Tip #3: Capture tasks faster with these top keyboard shortcuts.

On the Mac, or on your iPad with a keyboard attached, these top keyboard shortcuts will help you navigate OmniFocus faster:

General Keyboard Shortcuts	
Ctrl + Opt + Space	Open Quick Entry
Cmd + Shift + L	Flag task
Cmd + Shift + F	Focus on project/folder
Cmd + K	Refresh current view (“Clean Up”)
Cmd + O	Quick Open
Cmd + Opt + F	Search

But you can do more. With OmniFocus’s so-called **bare key editing** shortcuts, you can quickly adjust properties of tasks and lists, like due dates or tags.

When you have a task or list selected, just press the right letter on your keyboard and you’ll immediately be able to set that property:

Bare Key Editing Shortcuts	
Set clear / completed status	Space bar
Flag or unflag	F
Edit task or list title	E
Edit note	N
Edit project	P
Edit tags	T
Edit defer	Shift + D
Edit planned	Shift + P
Edit due	D
Edit repeat	R
Delete	Command + delete

Tip: In OmniFocus’s settings, make simply pressing the delete button on your keyboard — rather than command + delete — sufficient to delete a task.

Tip #4: Use this proven structure to start organizing your to-dos.

There are a million ways to organize your folders, lists, and projects in OmniFocus.

Here's my recommended structure to start with.

Work with it for a while, then customize it to your needs.

But err on the side of keeping things simple.

After all, the more complexity you add now, the more complexity you'll need to maintain.

And the more maintenance your system needs... the more likely you are to stop using it.

Top-level folders:

- Admin & Finances
- Fun & Trips
- Health
- Home
- Learning & Planning
- Relationships
- Wishes
- Work/Studies/Business
- Templates

Each folder should contain a single-action list called Single Actions for individual to-dos in that part of your life that don't merit their own entire project.

When you do create a (sequential or parallel) project — for something that's going to take longer and that you won't finish all at once — put that project under the appropriate top-level folder.

P.S. Not sure when to use a sequential or parallel project? You'll learn exactly when to use which — and also when not to use projects at all! — in my [OmniFocus course](#).

Tip #5: Customize your Forecast perspective.

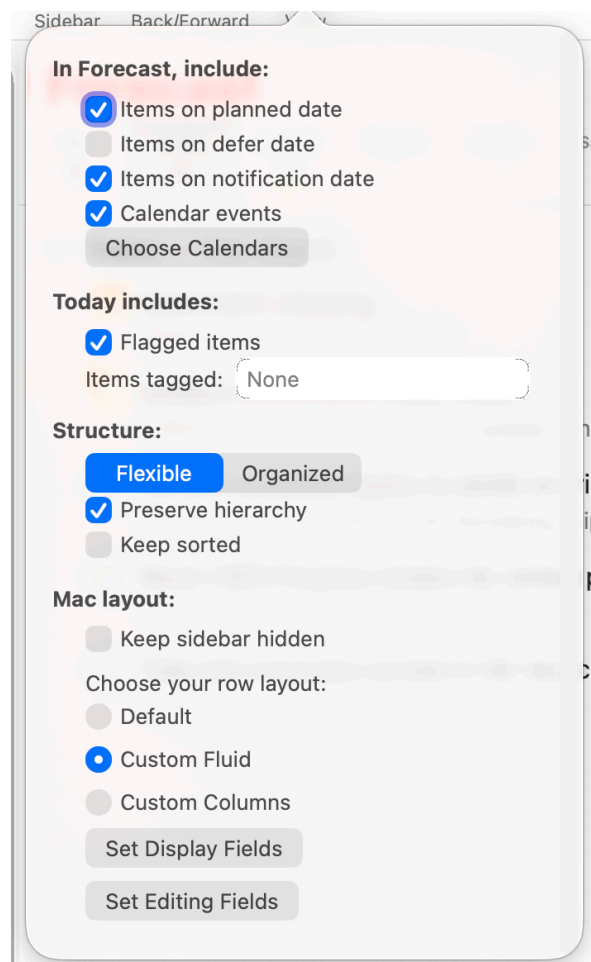

The Forecast perspective is like your command-and-control center in OmniFocus.

It's where you'll be spending most of your time throughout the day, as you work through your to-do list.

So it's worth customizing.

And there are quite a options for this now! You can show items with a planned date, a defer date, a notification set for that date... you can show your calendar events... you can choose a "flexible" or "organized" hierarchy... what does it all mean?

Here's my recommended setup:

Let's organize your to-dos and projects once and for all.

You've begun to use OmniFocus correctly now. But there's a lot more to this app.

OmniFocus is like the Ferrari of to-do apps. So you don't want to be driving it like a Honda Civic.

If you master OmniFocus's features and dial in your workflow now, your life will be so much easier.

Here's the thing, though. You *could* piece together information on using OmniFocus from random places all over the Internet.

But how long would that take? And what is your time worth to you?

I've designed Organize Your Life with OmniFocus to teach you exactly what you need to get organized with OmniFocus — no more and no less.

Enroll in the course today and you'll save tons of time compared to figuring things out yourself.

Think about what you could do with the extra time.

You could spend it with your kids. You could spend it learning to play the guitar. Or you could, you know, spend the time doing the actual work you want to do!

Here's what three people who took my course said:

"I went from 50% productivity to 1000%. I finished my 2 University courses this August with A and A+ and at the same time launched 2 new products while still maintaining my business and its current products, all in one month!" — Violet P.

***"I have been trying to use OmniFocus on and off for YEARS, like maybe a decade and after Peter's course this is the FIRST time I actually feel like I know what I'm doing. As far as I'm concerned **Omni needs to bundle Peter's videos with a pro + tutorial version** because it makes it SO SO much more understandable and useful."* — Andrew**

*“Peter’s course brought a couple of breakthrough moments for me that were quite literally **life changing**. I know that sounds dramatic, but when everything you do stems from this workflow system, and someone removes a clog from your system, it really is life changing.” — Mark H.*

You can either keep doing what you’ve been doing and stay where you are — or enroll today and finally get organized.

Every day you wait is another day full of overwhelm and missed opportunities.

So don’t hesitate. [Learn more and enroll today.](#)
